

Dear Hippocampal Conference Attendee,

This year, the Neuroscience Journal Series at Frontiers is delighted to announce its collaboration with the Spring Hippocampal Research Conference. We are particularly excited by the opportunity to reflect the Conference topics in our journal in the shape of an article collection, creating a permanent, digital record of the work presented at the Conference. All investigators are welcome to contribute whether or not they attend the Conference.

We welcome you to submit your research to the "[Spring Hippocampal Research Conference and Beyond](#)" article collection led by Professor Jochen Meier, Editor-in-Chief of [Frontiers in Molecular Neuroscience](#), Profs James Mennerick, Mariangela Chisari, James Ainge, Akiva Cohen, and Lisa Topolnik.

This fully open access collection aims to bring together examples of the most exciting and recent developments in the area of Neuroscience and extend the visibility of the work presented at the Conference.

We particularly encourage the submission of original research reports, empirical reports, computational models, reviews and meta-analyses, as well as position/theoretical papers. Submissions are encouraged from across all research areas represented within the conference theme.

Suggested research themes for contributions include, but are not limited to different sub-fields of neuroscience including molecular/cellular, systems, cognitive, behavioural and computational neuroscience.

This article collection welcomes a variety of [article types](#) with differing [fees](#) associated. Please contact the editorial office at Frontiers should you have any questions regarding this, or any other queries (molecularneuroscience@frontiersin.org).
